

## **EN ISO 14001:2015 / ISO 50001:2018- ENVIRONMENTAL & ENERGY POLICY**

---

ELPEDISON is committed to the protection of the environment, preventing any conditions and incidents that may lead to pollution or harm, as well as managing environmental and energy resources sensibly and responsibly.

To this effect, ELPEDISON has implemented within its Integrated Management System, an Environmental and Energy Management System according to the standards EN ISO 14001:2015 and EN ISO 50001:2018 and has applied appropriate documented procedures and work instructions for its operations and facilities.

Moreover, ELPEDISON has put in place measures and controls for measuring and reducing the impact of its operations to the environment, avoiding and minimizing risks as well as treating any factors and circumstances that may lead to pollution or other incidents.

The Company policy on Environment and Energy Management is focused on the following principles:

- Full compliance to all relevant and applicable Greek and European legislative, normative and contractual requirements, environmental licenses and permits as well as standards, guidelines and best practices and other obligations
- Provision of all necessary resources and related information for minimizing the environmental footprint of its activities and achieve environmental and energy objectives and targets.
- Set-up, maintenance and monitoring of its facilities, installations and operations, aligned with requirements and best practices related to the environment, taking into account the nature, scale and particularities of the company's activities
- Detailed and regularly updated assessment of the environmental aspects and parameters, in order to identify and treat, or effectively minimize any factors that may lead to pollution, using procedures and programs
- Efficient and environment-friendly management of company solid and liquid waste, focusing on separate collection and recycling
- support the procurement of energy efficient products and services that impact energy performance and implementation of design activities that consider energy performance improvement
- Rational management and sustainable use of resources and maximized savings energy by implementing a system for monitoring the consumption of natural resources, focusing on energy performance improvement

- Continuous and rigorous training for its staff and third parties on environmental issues
- Continuous measurement and evaluation of its environmental and energy performance, based on appropriate indicators and objectives.
- Continual improvement of the environmental and energy management system to enhance environmental performance

ELPEDISON is committed to:

- Communicate this policy to its employees, subcontractors and related third parties working under the control of the company, and to any other interested party and the public in order to provide awareness on environmental obligations and procedures
- Continuously reduce the impact of its operations to the environment and prevent pollution
- Provide regular and suitable training to its personnel
- Fully implement all procedures and work instructions that comprise the Environmental and Energy Management System
- Review and update this policy and related documentation so that it remains relevant and appropriate to the company needs and operations and fully aligned with current legislation.
